

FIG. 1

FIG. 2

The diagram illustrates the timing of various signals during a Quad-Speed lighting period. The top horizontal axis represents the 'Vsync: Frame Packet Period'. Below this, a sequence of packets is shown: csp, ud1, ud2, ud3, ud4, ..., udN, csp, res. The 'Driving Circuit' is connected to the 'External' circuit. The 'vsync' signal is shown as a series of pulses. The 'Common Control Address' is shown as a sequence of addresses: adr_0, adr_1, adr_2, adr_3, ..., adr_0, adr_1, adr_2, adr_3. The 'Data DMA Control Section' is shown as a sequence of data: data_0, data_1, data_2, data_3, ..., data_0, data_1, data_2, data_3. The 'Control Section' is shown as a sequence of control signals: Hsync, drv1_data, drv2_data, drv3_data, drv4_data. The 'BLANK' period is indicated. The 'Common Control Address' is shown as a sequence of addresses: adr_3, ..., adr_0. The 'Quad-Speed lighting Period' is the total duration of the data and control sections.
